## The Ruthless Aristocracy That Controls Our Fossil Fuel Future and the Urgent Imperative to Stop Them

By Keith Gibson

In his groundbreaking book, Making America Copper, Keith Gibson exposes the hidden world of the fossil fuel industry, revealing the powerful families and corporations that have profited immensely from our dependence on oil, gas, and coal. Gibson argues that these "fossil fuel aristocrats" have used their wealth and influence to block the transition to renewable energy sources, even as the climate crisis worsens.

Gibson's book is a deeply researched and meticulously documented account of the fossil fuel industry's stranglehold on the American economy and politics. He traces the rise of the industry from its humble beginnings in the 19th century to its dominance of the global economy in the 20th and

21st centuries. Along the way, he exposes the dirty tricks and deceptive practices that fossil fuel companies have used to maintain their profits and power.

Gibson also profiles the key players in the fossil fuel industry, including the Koch brothers, the Rockefellers, and the Waltons. These families have used their vast wealth to fund climate denial campaigns, bankroll conservative politicians, and lobby against environmental regulations. As a result, they have been able to delay the transition to renewable energy and protect their fossil fuel profits.

Making America Copper is a powerful indictment of the fossil fuel industry and its allies in government. Gibson provides a clear and concise explanation of the climate crisis and the urgent need to transition to renewable energy sources. He also offers a roadmap for how we can achieve a sustainable future.

This book is essential reading for anyone who wants to understand the climate crisis and the role that the fossil fuel industry has played in creating it. It is also a call to action for all of us to demand a just and equitable transition to a clean energy future.
