But then, about 13.8 billion years ago, something happened. A tiny speck of energy erupted into existence, and from that speck came everything that is. The universe was born.

And within that universe, on a small blue planet called Earth, a strange and wonderful creature emerged. A creature that could think, feel, and create. A creature that could understand the universe itself.

That creature was us.

How did we come to be? How did we evolve from simple organisms into beings who can contemplate the meaning of life and the nature of reality?

These are some of the biggest questions that humans have ever asked. And in his new book, *The Ape That Understood the Universe*, author Jonathon Keats offers some fascinating new insights into these questions.

Keats argues that the key to understanding human consciousness lies in our evolutionary history. We are, after all, just a product of our environment. And the environment in which we evolved was one of constant danger and uncertainty.

In order to survive, we had to develop a brain that could quickly and efficiently process information. We had to be able to learn from our mistakes and adapt to our changing surroundings.

But as our brains grew more complex, so too did our ability to think abstractly. We began to wonder about the world around us. We began to ask questions about our place in the universe.

And eventually, we began to understand the universe itself.

The Ape That Understood the Universe is a journey through the history of science, philosophy, and art. Keats shows how each of these disciplines has contributed to our understanding of consciousness.

He also explores the latest research in neuroscience and psychology to provide a comprehensive overview of the current state of knowledge on consciousness.

The Ape That Understood the Universe is a fascinating and thought-provoking book that will change the way you think about yourself and the world around you.

If you're interested in the big questions of life and the universe, then The Ape That Understood the Universe is a must-read.
